

# ENTE HC-D800 HDPE

More airflow and polluted air  
requires more media.

## DESCRIPTION

Many situations have a greater airflow and high peaks with polluted air. In these cases the "small" filters will not be sufficient and the HC-D800 must be used.

This HDPE bulk filter can contain up to 1 m<sup>3</sup> of filter media.

Depending on your situation - the type and degree of pollution and flow rate - Entec advises how much and which type of medium should be used for the best result in your specific situation.

Most of the time we create a special and customer specific blend of media for the best results.
